

# A COLLABORATIVE LOGISTICS TECHNOLOGY SOLUTION, CUSTOMIZED TO HOW YOU WORK.

When a client engages KDL Logistics for an integration project, our first step is to connect with their team to define the optimum data flow sequence for their logistics processes, then plug in our APIs where they add the most value. From there, we establish ongoing support meetings and timelines to accelerate development and implementation. Depending on the level of client engagement, our specialists can get development timelines down to as little as a few days.

## API Technology Built to Work With Your ERP, Whatever It Is.

KDL Logistics' proprietary TMS, KDL Connect, is built on API technology that provides real time interaction with carriers. KDL Connect features five core API services: rating, shipment creation, schedule, tracking, and proof of delivery document retrieval. These APIs have the capability to connect the TMS directly into a client's ERP system to streamline shipment processing.

## APIs and Their Function

- **Rating**  
receives order details and returns various carrier options, transit times, and costs
- **Shipment Creation**  
receives order information and creates a draft shipment to be completed by shipping
- **Scheduling**  
receives shipment information and books a pickup with the carrier requested and returns pickup ID
- **Tracking**  
receives a shipment number and returns the tracking information available for that shipment
- **Proof of delivery**  
receives a shipment number and returns the physical signed deliver receipt

### We Complement Any Size IT Team

Shippers are commonly concerned about overwhelming complexity of technology integration, or about a lack of IT support. Part of KDL's expertise is partnering with our clients to understand the specifics of their system and environment and doing what it takes to support modernizing their logistics process as quickly and painlessly as possible. We are equally adept at adjusting to environments where there is in house staff, preferred vendors, or no support at all. In those instances where you need an outside vendor, we have a proven process for making an intelligent recommendation quickly.

### Get a Modern Logistics System and a Pain-Free Partnership

The KDL approach to successful integration is based on understanding that we are not an expert with a client's ERP, and our clients are not experts with our TMS. It is the collaborative effort of us working together as responsive partners, finding the best combination of our skills to unlock the full potential of their system. KDL can help clients overcome the fear of complexity and downtime and push their business ahead through automation.
